Chennai, Tamil Nadu

SUMMARY

Senior DevOps & Platform Engineer with 5.5 years of experience designing, implementing, and operating secure, scalable cloud platforms across AWS and Oracle Cloud Infrastructure (OCI). Progressed from hands-on infrastructure automation and cloud migration to leading organization-wide Platform Engineering, Kubernetes modernization, DevSecOps, and release governance initiatives. Skilled in cloud-native architecture, Infrastructure as Code, and self-service platforms that improve platform security, operational reliability, and engineering productivity.

SKILLS

Cloud Platforms – AWS: EC2, ECS, EKS, ECR, ELB, ALB, Auto Scaling, IAM, S3, VPC, VPC Link, Route 53, SNS, SQS, SES, Lambda, API Gateway, CloudFront, CloudFormation, CloudTrail, CodeDeploy, CodePipeline, CloudWatch, Athena, Glue, RDS, DynamoDB, Transit Gateway, Site-to-Site VPN

Cloud Platforms – OCI: OKE, Compute, IAM, Compartments, Object Storage, Load Balancer, Vault, VCN, Monitoring, Autoscaling, MySQL, NoSQL, IPsec VPN, BGP

Kubernetes & Containers: Kubernetes, Amazon EKS, Oracle Kubernetes Engine (OKE), Docker, Helm

Infrastructure as Code: Terraform, Atlantis, Ansible

CI/CD & GitOps: Jenkins, GitHub Actions, GitLab CI, ArgoCD

Platform Engineering: Apache Superset, Harbor, Healenium, BrowserStack, Maestro, Kafka, Nginx, Apache, PM2

DevSecOps & Security: SonarQube, Semgrep, Trivy, Gitleaks, GitHub Apps, Keycloak, Teleport, Certbot

Monitoring & Observability: Prometheus, Grafana, CloudWatch, Kibana

Programming & Scripting: Python, Bash/Unix Shell, Ruby, Node.js, YAML, JSON

Databases: SQL, MySQL, MongoDB, Postgres

Version Control: Git, GitHub, GitLab

Operating Systems: Linux, Ubuntu, macOS, Windows

EXPERIENCE

Foodhub

Nov 2025 – Present

Senior DevOps Engineer

Global Online Food Ordering & Delivery Platform

Platform Engineering

- Led the organization-wide adoption of Compliance Gate, a governance platform built with GitHub Apps and Jenkins that enforces automated security, quality, and compliance checks on every pull request across engineering repositories.
- Architected and implemented Promotion Gate, an in-house serverless release-governance platform built on AWS Lambda and API Gateway that automates release-promotion validation, enforces branch lineage, and prevents unauthorized production releases.
- Developed QualCast, a centralized code-quality platform that consolidated SonarQube reporting and automated analysis, providing organization-wide visibility into code quality.
- Designed and delivered a highly available Apache Superset platform with Keycloak SSO/RBAC on Amazon EKS, enabling secure self-service analytics for 300+ engineers.
- Architected and implemented a containerized Jenkins CI platform on Amazon EKS, replacing static build infrastructure with scalable, Kubernetes-based build agents to improve build throughput.
- Designed a reusable CI/CD framework built on Jenkins Shared Libraries, standardizing build, test, and deployment pipelines across engineering teams while accelerating onboarding of new services.
- Developed reusable ArgoCD deployment templates to standardize GitOps-based application deployments across services.

› **Cloud Platform Modernization**

- Led Amazon EKS upgrades across Development, SIT, and Production environments, improving cluster reliability, performance, and observability through Prometheus and Grafana.
- Led cloud modernization initiatives (Teleport upgrade, PHP 8 migration, and application secret/key rotation), strengthening infrastructure security and access governance.
- Standardized multi-architecture Docker image builds for ARM64 and AMD64 platforms, ensuring consistent container builds and deployments across development and production environments.

› **Developer Experience**

- Integrated Maestro and BrowserStack into CI/CD pipelines, enabling scalable automated mobile application testing across release workflows.
- Implemented Healenium on Amazon EKS to enable self-healing UI automation and reduce flaky-test maintenance.

› **Leadership & Governance**

- Standardized CI/CD tooling and engineering workflows across 40+ repositories, improving deployment consistency and release governance.
- Optimized AWS infrastructure costs by implementing S3 lifecycle policies and automating cleanup of unused EC2 instances, ELBs, and NAT Gateways.
- Collaborated with engineering, QA, security, and platform teams to establish DevSecOps standards, mentor engineers, and drive adoption of Platform Engineering practices.

Thapovan Info System Inc

Apr 2024 – Oct 2025

Senior DevOps Engineer

Paltalk — *Video Chat Platform*

› **AWS to OCI Migration**

- Led the migration of 70+ services from AWS ECS to Oracle Kubernetes Engine (OKE), improving scalability, resilience, and operational consistency.
- Migrated compute from AWS to OCI by preparing Ubuntu VMs, exporting via Amazon S3, and relaunching them as OCI compute instances.
- Automated large-scale data migration from AWS S3 to OCI Object Storage using rclone, improving reliability and efficiency.
- Hosted static web assets on OCI Object Storage fronted by API Gateway, enabling secure, API-driven application access.

› **Networking, Security & IaC**

- Configured Site-to-Site VPN between AWS and OCI for secure hybrid-cloud connectivity throughout the migration.
- Designed OCI networking with Virtual Cloud Networks (VCN) and Load Balancers, ensuring private networking, secure routing, and controlled service exposure.
- Centralized log collection with OCI Logging on OKE and secret management with OCI Vault.
- Designed and enforced fine-grained RBAC through OCI IAM policies and dynamic groups across services.
- Implemented Atlantis to automate Terraform workflows with remote state, strengthening Infrastructure-as-Code governance through encryption, centralized audit logging, and cross-cloud monitoring.

› **CI/CD Modernization**

- Migrated 50+ repositories from GitLab CI/CD to GitHub Actions, implementing reusable workflows that standardized build, test, and deployment processes.
- Hardened CI/CD governance with GitHub repository rulesets, branch protection policies, and encrypted secrets for sensitive credentials.

Neuberg Diagnostics — *Healthcare & Diagnostics*

- Led the zero-downtime migration of eight production websites from GoDaddy VPS to AWS ECS, modernizing legacy workloads onto a scalable capacity-provider architecture.
- Designed the end-to-end migration plan and collaborated with the client on architecture approval and execution.

Thapovan Info System Inc

DevOps Engineer

Apr 2022 – Mar 2024

Paltalk — Video Chat Platform

- Migrated servers from EC2 to ECS using capacity providers, improving service management and operational efficiency.
- Implemented GitLab CI auto-scaling on AWS Fargate, reducing costs and removing dependency on standalone runners.
- Deployed SonarQube (SAST) in ECS and integrated it into CI/CD for continuous static code analysis.
- Automated SonarQube report delivery to Slack via the CNES plugin, giving developers continuous quality feedback.
- Migrated standalone Selenium to an ECS cluster, improving the scalability and execution reliability of test environments.
- Enhanced Nightwatch E2E automation with Selenium and regional test environments configured via VyprVPN.
- Coordinated end-to-end releases including production deployments and SQL audits, and oversaw monitoring with Grafana and Prometheus.

Lifestyle Housing (*Residential Real Estate*) — Developed reusable Terraform and Ansible modules to automate infrastructure provisioning and configuration, reducing manual deployment effort.

Thapovan Info System Inc

Junior DevOps Engineer

May 2021 – Mar 2022

Reimbursify — Healthcare Reimbursement Solution

- Optimized AWS infrastructure by migrating to ECS Fargate (serverless) with Jenkins-based automation.
- Automated deployments, replacing manual release processes and improving operational efficiency.
- Implemented CloudWatch monitoring (alarms, events, logs, metrics) to ensure high availability and reliability.
- Designed scalable, reusable Terraform (IaC) templates for consistent infrastructure provisioning.

Radiance Ticketing System (*Event Management*) — Containerized the Odoo application with Docker and built a full CI/CD pipeline using GitLab Runner.

G-Square / Casagrand (*Real Estate*) — Deployed a secure SSL web server via IaC and automated MySQL backups with Slack notifications and CI/CD deployments.

AWARDS

 **Star Performer Award** | Foodhub | May 2026

CERTIFICATIONS

Oracle Cloud Infrastructure Architect Associate — Oracle

GitOps Fundamentals — Codefresh

B1 Business Preliminary — Cambridge University

EDUCATION

B.E. in Electrical & Electronics Engineering 2016 – 2020
Vel Tech, Chennai

HSC in Bio-Maths 2015 – 2016
Santhome Higher Secondary School, Chennai

SSLC (CBSE) 2013 – 2014
The Hindu Senior Secondary School, Chennai
